

Triple success for Calorex

A swimming pool company from Kent has scored a hat-trick of top industry awards for three residential pool projects that all feature Calorex Pro-Pac heat pumps.

Bespoke Swimming Pools was recognised in the Residential Outdoor Pool of the Year category at the 2016 UK Pool & Spa Awards – picking up a trio of Silver Standard accolades.

All of the award-winning swimming pools are heated by Calorex's Pro-Pac 22Y heat pumps.

Manufactured in the UK using globally recognised premium components, the Pro-Pac range is designed specifically for heating outdoor swimming pools, or swimming pools that benefit from a semi-permanent enclosure, to extend the useable period of the pool.

Featuring touch screen controls and built under ISO 9001 accreditation, Pro-Pac air source heat pumps are designed to provide an industry leading coefficient of performance, saving CO₂ and reducing operating costs

"The good thing about Calorex's heat pumps is that they are developed specifically for the UK climate," comments Tony Keogh, Managing Director of Bespoke Swimming Pools.

"If we're working for a client that requires high-spec components, we will always specify Calorex products. They're the top of the range and they offer peace of mind as I know that the client won't be disappointed."

Pro-Pac Y pumps, like those chosen for the award-winning

projects by Bespoke Swimming Pools, are suited to heating indoor or outdoor pools all year round and can operate in temperatures as low as -15°C. Whereas Pro-Pac X heat pumps are ideal for outdoor pool heating or pools with a semi-permanent enclosure to extend

"If we're working for a client that requires high-spec components, we will always specify Calorex products. They're the top of the range and they offer peace of mind as I know that the client won't be disappointed."

the useable period of a normal outdoor pool, when temperatures are above 5°C.

Tony adds: "All three of the heat pumps that we fitted for the projects mentioned have been successfully and efficiently heating the pool water since installation. In fact, we very rarely have any issues with Calorex products."
